

Final Project
Front End Design
Group Assignment

Demonstrate in the browser interface:

- Working front-end launched locally with npm start. (5 pts.)
- Intuitive user interface with login/logout/signup options, item components. (Can use a boolean variable *ie. isLoggedIn* for now that you hard code to true or false to indicate whether user is logged in. This is a temporary solution until authentication is added.) (5 pts.)
- Client-side routes established (demonstrate urls in browser) - (5 pts.)
- CSS styling of all user interfacing elements (5 pts.)
- Use of state to re-render components that change. (5 pts.)
- Product/item components that contain:
 - Image (2 pts.)
 - descriptive text (2 pts)
 - Logged in user should be able to:
 - Enter information in a form to add a new item (2 pts)
 - Update the item information in a form. (2 pts)
 - Delete item (2 pts)

Show in the source code:

- Root component (app.js) returning (2 pts)
 - page/section/header component(s)
- Product/item components (3 pts)

Create a video demonstration of the above and submit to the project dropbox on eLC.
